Art Unit: 3764

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10, 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hale in view of Joo-Tai.

Hale discloses a device comprising a tunnel-like structure and a plush toy.

In regard to claim 4, Hale discloses a device having a floor, which is angled, (applicant has not claimed an angle).

In regard to claim 5 Hale discloses a device comprising an electronic device, which is attached to basket (14) through other elements of the device.

In regard to claim 8, element 34 is an appendage.

In regard to claim 12 and 13 the device of Hale as disclosed and has a power supply in the form of a battery and a switch directly or indirectly coupled to an electronic device.

Hale however does not disclose his tunnel-like passage as being coiled.

Joo-Tai however discloses a similar container wherein the container is a coiled loop, having an opening, tie members (17) positioned as shown in Fig. 3 on both ends of the tunnel-like member, a floor angled 90° from its side walls, a lid (20) hingedly at element (21) a sleeve (12) retaining a coiled wire.

Art Unit: 3764

In regard to claims 1, 2, 3, 6, 7, 9 and 10 and given the above teachings of Joo-Tai and given the teachings of Hale of using a container as a device on which to mount a figurine the examiner notes that it would have been obvious to one of ordinary skill in the art to substitute the container of Hale with a container such as shown by Joo-Tai as means by which to make the device of Hale more portable.

In regard to claim 10, the examiner considers the upper rim of the device of Joo-Tai as being a portion of the sleeve upon which the backboard appendages and electronic element are mounted. Hale discloses in col. 3 lines 48 through col. 4 lines 1-25 that different element of electronic configuration may be positioned at various locations on the device which is attached to the tunnel-like structure at the upper sleeve area.

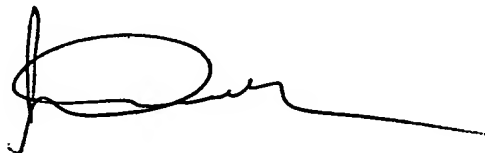

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the overall device of Poynter, Bear, Hale (5762569) and Stewart.

Note the overall device of Peska and opening 18 and 16 of Peska.
